

INSTALLATION GUIDE

FELTON

HALO RAIN SHOWER COLUMN HRSCC

SYSTEM REQUIREMENTS

To ensure the optimum performance and customer satisfaction please adhere to the following:

- Flush out all pipe work prior to installation.
- Installation should comply with relevant local authority requirements.
- Backflow protection must be provided in accordance with AS/NZS 3500 and local authority requirements, as assessed and installed by a registered plumber; backflow devices may or may not be supplied depending on product.
- Installation must be carried out by a registered plumber in accordance with AS/NZS 3500, the New Zealand Building Code and Felton instructions.
- Inspection and maintenance must be carried out in accordance with Felton instructions to ensure ongoing performance and compliance.

AS/NZS 3500.1 states that pressures above 500kPa can cause damage from water hammer, reduce the life of appliances, taps & fittings, cause excessive noise in the system and recommend that a pressure limiting valve (PLV) be fitted.

Failure to comply with the above will void all warranties.

	MINIMUM	MAXIMUM
Operating pressures	150kPa (21.8psi)	500kPa (72.1psi)
Operating Hot Water Temperatures	55°C	60°C
Operating Cold Water Temperatures	5°C	N/A

BUILDING PRODUCT INFORMATION REQUIREMENTS (BPIR) RELEVANT BUILDING CODE CLAUSES & CONTRIBUTIONS TO COMPLIANCE

This product is Watermarked under license **WM25644 - Showers AS/NZS 3662: 2005**

B2 - Durability

B2.3.1 (c) applies (performance of building elements)

Proof of durability – Service history: Felton products have been installed and used in NZ for the last 50 years and warranty calls are at a minimum and within the quality principles of Felton. Products that are WaterMark certified are subject to endurance testing.

F2 - Hazardous building materials

F 2.3.1 applies (performance)

Backflow protection must be provided in accordance with AS/NZS 3500 and local authority requirements, as assessed and installed by a registered plumber; backflow devices may or may not be supplied depending on product.

G1 - Personal Hygiene

G1.3.1 applies (performance)

Felton shower products are designed to provide effective personal hygiene through the safe and reliable delivery of potable water. Products are WaterMark certified and tested to AS/NZS 3500, ensuring suitability, performance, and durability for use in New Zealand plumbing systems.

G1.3.2 applies (performance)

Backflow protection must be provided in accordance with AS/NZS 3500 and local authority requirements, as assessed and installed by a registered plumber; backflow devices may or may not be supplied depending on product. Product features, performance information, and installation requirements are provided on Felton website product pages and supporting brochures to ensure correct specification and installation.

G12 - Water Supplies

G12.3.2 applies (contamination of water)

Backflow protection must be provided in accordance with AS/NZS 3500 and local authority requirements, as assessed and installed by a registered plumber; backflow devices may or may not be supplied depending on product.

 NZ 0800 743 358 or (09) 528 0810 | AUS 1800 798 760

HOW TO INSTALL (CONTINUED)

4. Fit the slider onto the rail, sliding down from the top of the rail as shown.

5. Take the completed bottom section and screw into the top mounting bracket as shown.

6. Screw the brass nipple into the wall wingback/outlet. Sealant required on thread to achieve a water tight seal. Flush out pipework.

Measure 830mm from centre of the wingback to the centre of the top mounting bracket.

Using a level and the rail as a guide, mark and pre-drill top mounting bracket hole, and screw this into the wall. (Note - the concave side should be facing outwards from the wall).

(If installing into concrete, use toggles provided by pre-drilling both top and bottom mounting holes to 9.5mm diameter. Squeeze to close each toggle and push in until flush with the wall).

7.

Fit the entire assembly onto wall by tightening the grub screws on the bottom and top mounting bracket.

Check the flow restrictor is fitted into the handpiece. Screw the hose onto the diverter and handpiece and attach the handpiece to the slider on the rail.

Check the flow restrictor is fitted into the Rain Head.

8. Fit the Rain Head onto the thread on the end of the arm.
