

INSTALLATION GUIDE

FELTON

AXISS RAIN HEAD WALL MOUNTED (450MM)

SYSTEM REQUIREMENTS

To ensure the optimum performance and customer satisfaction please adhere to the following:

- Flush out all pipe work prior to installation.
- Installation should comply with relevant local authority requirements.
- Backflow protection must be provided in accordance with AS/NZS 3500 and local authority requirements, as assessed and installed by a registered plumber; backflow devices may or may not be supplied depending on product.
- Installation must be carried out by a registered plumber in accordance with AS/NZS 3500, the New Zealand Building Code and Felton instructions.
- Inspection and maintenance must be carried out in accordance with Felton instructions to ensure ongoing performance and compliance.

AS/NZS 3500.1 states that pressures above 500kPa can cause damage from water hammer, reduce the life of appliances, taps & fittings, cause excessive noise in the system and recommend that a pressure limiting valve (PLV) be fitted.

Failure to comply with the above will void all warranties.

	MINIMUM	MAXIMUM
Operating pressures	35kPa (5.1psi)	500kPa (72.1psi)
Operating Hot Water Temperatures	55°C	60°C
Operating Cold Water Temperatures	5°C	N/A

BUILDING PRODUCT INFORMATION REQUIREMENTS (BPIR) RELEVANT BUILDING CODE CLAUSES & CONTRIBUTIONS TO COMPLIANCE

This product is Watermarked under license **WM25644 - Showers AS/NZS 3662: 2005**

B2 - Durability

B2.3.1 (c) applies (performance of building elements)

Proof of durability – Service history: Felton products have been installed and used in NZ for the last 50 years and warranty calls are at a minimum and within the quality principles of Felton. Products that are WaterMark certified are subject to endurance testing.

F2 - Hazardous building materials

F 2.3.1 applies (performance)

Backflow protection must be provided in accordance with AS/NZS 3500 and local authority requirements, as assessed and installed by a registered plumber; backflow devices may or may not be supplied depending on product.

G1 - Personal Hygiene

G1.3.1 applies (performance)

Felton shower products are designed to provide effective personal hygiene through the safe and reliable delivery of potable water. Products are WaterMark certified and tested to AS/NZS 3500, ensuring suitability, performance, and durability for use in New Zealand plumbing systems.

G1.3.2 applies (performance)

Backflow protection must be provided in accordance with AS/NZS 3500 and local authority requirements, as assessed and installed by a registered plumber; backflow devices may or may not be supplied depending on product. Product features, performance information, and installation requirements are provided on Felton website product pages and supporting brochures to ensure correct specification and installation.

G12 - Water Supplies

Felton sanitary fixtures intended for utensil washing and personal washing, showering, or bathing are designed to be connected to a hot water supply, ensuring suitability for potable water, non-contamination, and compliance with the performance requirements of NZ Building Code G12.

G12.3.7 (c) applies (flow rates)

All Felton products are designed, manufactured and inspected/tested, that are WaterMark certified, are subject to flow rates testing that is within the limitation set by the AS/NZS 3500 (NZBC) and the WELS regulations.

G12.3.10 applies (performance)

Felton water supply taps are designed to be accessible and operable, including for people with disabilities, when installed in accordance with Felton's instructions, supporting compliance with the accessibility requirements of the NZ Building Code.

WHATS IN THE PACK

HOW TO INSTALL

INSTALLING INTO STUD/NOG... (RECOMMENDED)

10-20mm PARALLEL

90°

FRONT OF WALL

WINGBACK

AT LEAST 15MM PROTRUDING

1. Ensure the wingback when fitted is parallel and square to the finished wall lining as shown
2. Cut and fit 1/2" BSP with at least 15mm protruding from the finished wall. Use seal tape when threading into wingback.

- 3A. Apply seal tape to exposed 1/2" BSP and then thread arm onto 1/2" until flush with wall and aligned.
- 3B. Apply silicone to underside of flange and fit until contact on wall.

4. Flush supply lines.

5. **FOR MAIN PRESSURE**
Fit as supplied.
- FOR LOW PRESSURE**
Remove rubber mesh filter and remove the flow restrictor and sleeve. Refit the rubber mesh filter and then screw rain head onto the arm.

REMOVE FOR LOW PRESSURE

6. Turn on water supply and check for leaks.
